Cambridge IELTS 9 Test 4

WRITING TASK 1

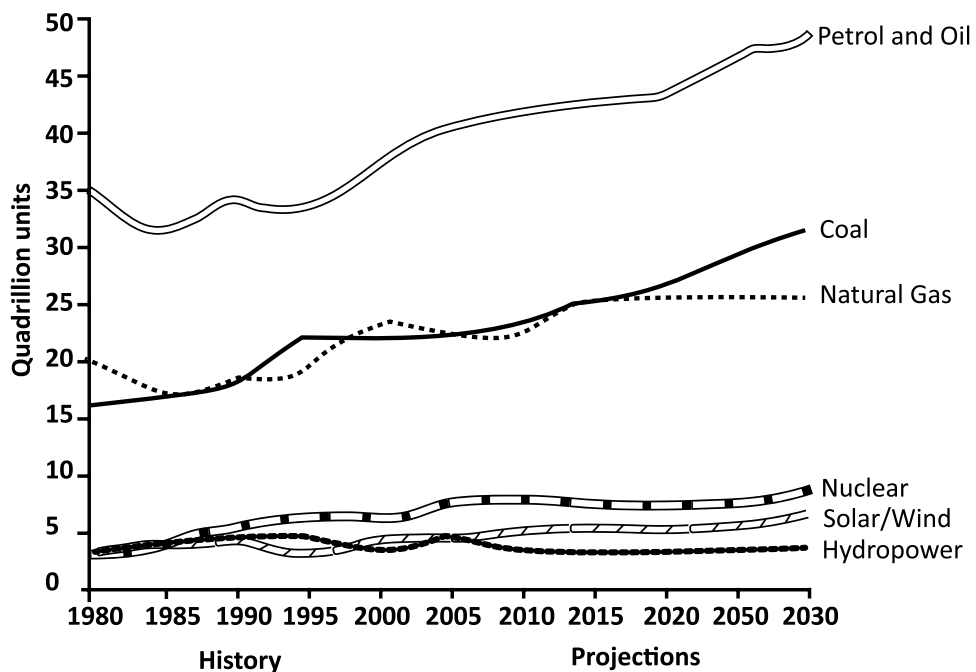

You should spend about 20 minutes on this task,

The graph below gives information from a 2008 report about consumption of energy in the USA since 1980 with projections until 2030.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

U.S. Energy Consumption by Fuel (1980-2030)

Sample Answer:

The graph illustrates the historical and projected consumption of different types of energy in the USA from 1980 to 2030, according to a 2008 report. This summary will delineate the main trends observed in the data, along with pertinent comparisons.

From 1980 to 2005, consumption of petrol and oil exhibited a steady increase, making it the most utilized energy source, followed by a projection to continue rising sharply until 2030. Coal consumption, after a period of moderate growth until 2005, is expected to plateau. Natural gas shows a gentle upward trend throughout the period, with an anticipated slight rise post-2005.

In contrast, nuclear energy use remained relatively stable with a slight increase towards 2005, and it is expected to maintain this trend into 2030. Renewable energies, such as solar and wind, demonstrate the most significant growth rate, albeit starting from a considerably lower base; their usage is projected to accelerate sharply after 2005. Hydropower consumption has seen minimal fluctuations and is predicted to remain stable.

Overall, while fossil fuels like petrol, oil, and coal continue to dominate US energy consumption, there is a notable shift towards more sustainable sources, such as solar and wind energy, which are projected to increase considerably.

Grammar Notes:

1. **Tense Consistency:** The essay shifts between past, present, and future projections smoothly.
2. The use of the past simple tense for historical data (e.g., “exhibited”, “remained”) and the future for projections (e.g., “is expected”) are correct and consistent.
3. **Passive Voice:** Utilized appropriately in an academic context to focus on the process or fact rather than the agent (e.g., “consumption of petrol and oil exhibited a steady increase”).

Vocabulary Activity:

- Replace the verbs “exhibited” and “shows” with synonyms that could fit the context.
- Discuss the difference in nuance between “plateau”, “remain stable”, and “level off”.
- Find alternatives for “significant” and “notable” that convey a similar level of impact but might be used in different contexts.

Cambridge IELTS 11 Test 3

WRITING TASK 1

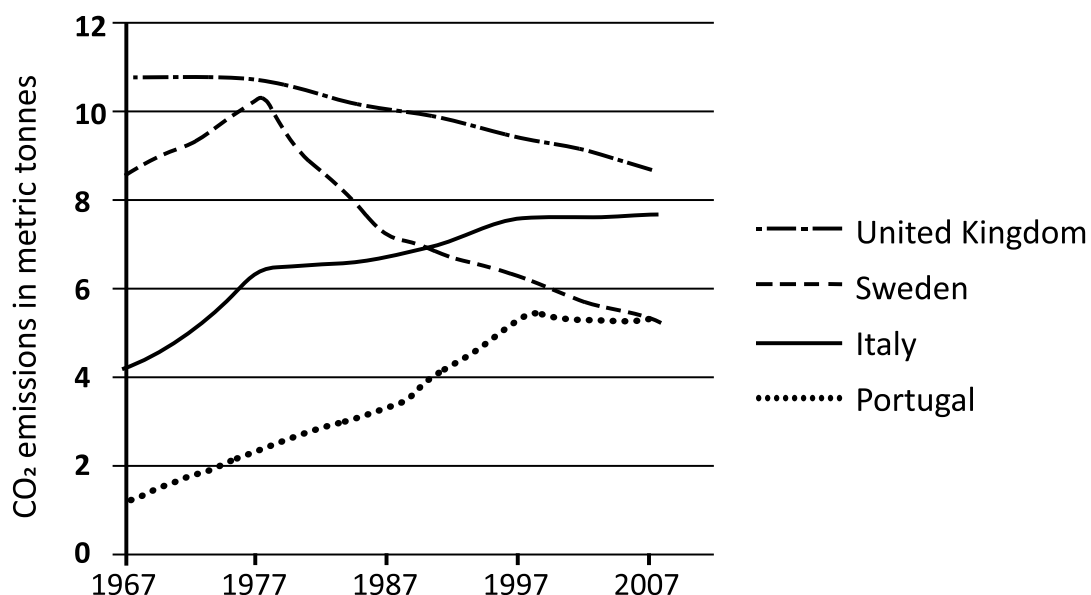

You should spend about 20 minutes on this task,

The graph below shows average carbon dioxide (CO₂) emissions per person in the United Kingdom, Sweden, Italy and Portugal between 1967 and 2007.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Average carbon dioxide (CO) emissions per person, 1967-2007

Sample Answer:

The graph provides a comparative analysis of average carbon dioxide (CO₂) emissions per person from 1967 to 2007 in four European countries: the United Kingdom, Sweden, Italy, and Portugal. This summary will highlight the primary trends and make relevant comparisons among the data presented.

Initially in 1967, the United Kingdom reported the highest CO₂ emissions, exceeding 11 metric tonnes per person, followed by a steady decline over the 40-year period, reaching below 9 metric tonnes by 2007. Sweden, starting just under 11 metric tonnes, experienced a more marked decrease in emissions. By 2007, emissions were reduced to around 5.5 metric tonnes, indicating a significant environmental shift.

Italy's emissions trend shows a gradual increase from about 4 metric tonnes in 1967 to peak at just under 8 metric tonnes in the late 1980s, followed by a steady decline to approximately 7 metric tonnes by 2007. Conversely, Portugal, which had the lowest initial emissions of less than 2 metric tonnes, saw a gradual increase over the period, surpassing 5 metric tonnes by 2007.

Overall, the data illustrates a general decline in emissions in more industrialized nations such as the UK and Sweden, which might reflect advancements in technology and a shift towards more sustainable practices. In contrast, less industrialized countries like Portugal showed an increase in emissions, likely due to growth in industrial activities and energy consumption.

Grammar Notes:

1. **Compound Sentences:** The use of coordinating conjunctions (e.g., "followed by") helps in connecting clauses effectively to show continuity and effect in trends.
2. **Modifiers:** Proper placement of modifiers (e.g., "gradually," "significantly") ensures clarity and adds detail to the descriptions of trends.

Vocabulary Activity:

- Find synonyms for "decrease," "increase," and "peak" that could alter the tone or formality of the summary.
- Discuss the difference between "emissions were reduced" and "emissions decreased" in terms of passive and active voice.
- Explore alternative phrases for "environmental shift" and "sustainable practices" to expand vocabulary related to environmental science.

Cambridge IELTS 15 Test 2

WRITING TASK 1

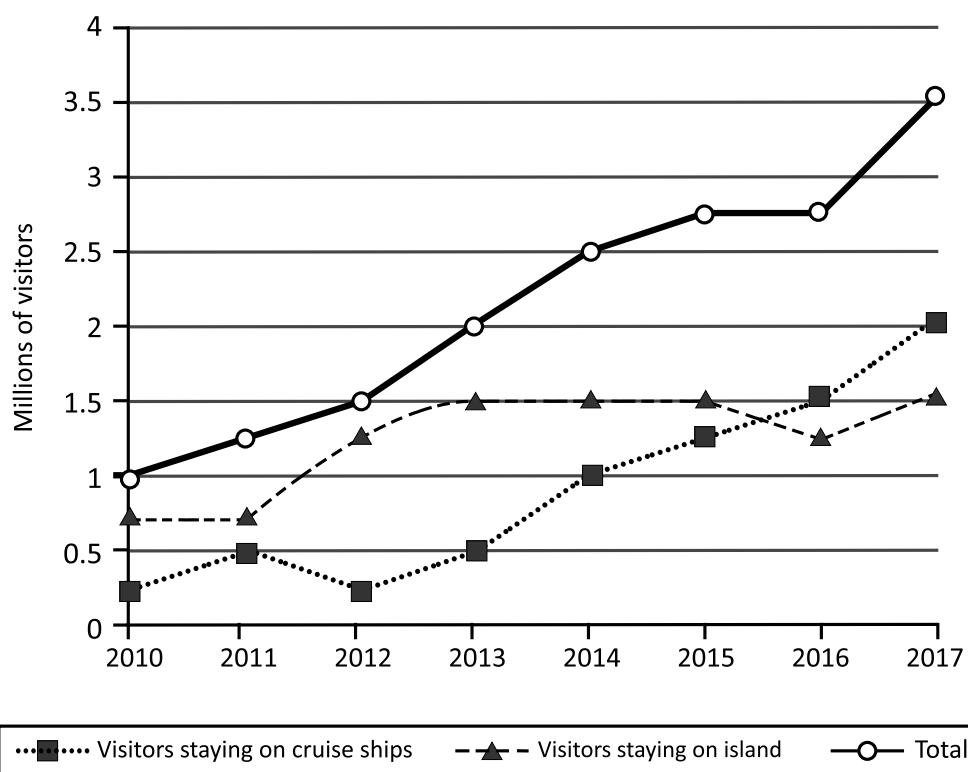

You should spend about 20 minutes on this task,

The graph below shows the number of tourists visiting a particular Caribbean island between 2010 and 2017.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Number of tourists visiting a Caribbean island (2010-2017)

Sample Answer:

The graph provides a detailed breakdown of the number of tourists visiting a particular Caribbean island from 2010 to 2017, differentiated into two categories: those staying on cruise ships and those lodging on the island.

Overall, there was a significant upward trend in the total number of tourists over the eight-year period, with a more pronounced increase observed among those staying on the island compared to cruise ship visitors.

Starting in 2010, about 1.25 million tourists visited the island, with the majority—approximately 1 million—opting for accommodations on the island itself. This number showed a consistent annual increase, culminating in nearly 2.25 million by 2017. The steady growth in this segment underlines the island's escalating appeal as a destination for longer stays.

In contrast, the initial figure for tourists arriving by cruise ships was significantly lower, at around 250,000 in 2010. Despite this lower starting point, this visitor segment also experienced growth, albeit at a more moderate pace, eventually reaching over 1.5 million by the end of 2017. The gradual increase in cruise visitors suggests a steady, albeit slower, growth in this form of tourism compared to traditional island stays.

Grammar Notes:

1. **Use of Commas:** Commas are used to separate clauses and to list items. Review the use of commas after introductory phrases (e.g., "Starting in 2010,") and in complex sentences to ensure clarity.
2. **Verb Tenses:** The past simple tense is correctly used throughout to describe changes over a specific past period. Pay attention to consistency in tense usage when describing historical data.

Vocabulary Activity:

- **Synonyms:** Students can replace words like "significant" and "moderate" with synonyms to expand their vocabulary. Suggest synonyms such as "considerable" for "significant" and "gradual" for "moderate."
- **Phrase Variations:** Encourage students to use different phrases to express increases and decreases. For example, replace "showed a consistent annual increase" with "exhibited steady yearly growth" or "demonstrated consistent annual rises."
- **Formality and Tone:** Discuss the impact of changing "escalating appeal" to "increasing attractiveness" and how such adjustments can affect the formality and tone of academic writing.
- These activities aim to enhance the students' understanding of language usage and grammatical structures in a way that is practical for high-level English proficiency tests like the IELTS.

Cambridge IELTS 17 Test 4

WRITING TASK 1

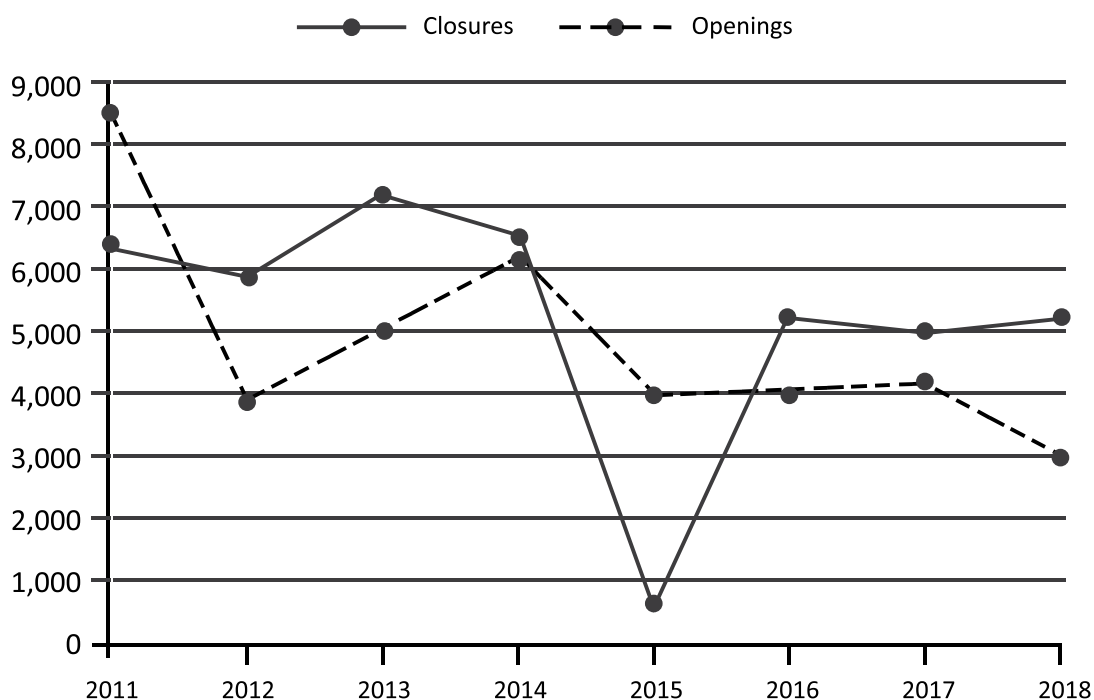

You should spend about 20 minutes on this task,

The graph below shows the number of shops that closed and the number of new shops that opened in one country between 2011 and 2018.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Number of shop closures and openings 2011-2018

Sample Answer:

The graph displays the yearly dynamics of shop closures and openings in one country from 2011 to 2018. It provides a clear comparison between the number of businesses shutting down and those launching during this period.

Overall, the number of shop closures showed a general decline over the years, despite some fluctuations, while the trend for new shop openings displayed more volatility, with significant ups and downs throughout the period. Initially, the number of closures dramatically outnumbered the openings, but this gap narrowed significantly by the end of the period.

In 2011, the graph shows a peak in shop closures at nearly 8,000, far surpassing the number of openings, which stood at around 3,000. This marked disparity highlights a challenging economic environment or market shifts at the time. Over the next few years, the closures experienced a sharp decline, reaching a low of approximately 4,000 in 2014, before rising slightly in the following years and then stabilizing at around 5,000 by 2018.

Conversely, the number of new shops opening after 2011 initially dipped to below 3,000 in 2013, before experiencing a surge in 2014, where the numbers almost paralleled those of closures. The following years saw a substantial drop, with a recovery peaking again in 2017 and a subsequent decline to just over 4,000 in 2018. The overall trajectory suggests a recovering entrepreneurial climate, though still prone to significant annual changes.

Grammar Notes:

1. **Verb Tenses:** It's important to consistently use the past simple tense when describing completed actions in specific years in the past. Avoid switching tenses when the timeline is historical and concluded.
2. **Subject-Verb Agreement:** Always ensure that the subject and verb in a sentence agree in number, especially when discussing two subjects (e.g., "the number of closures" and "the trend for new shop openings").

Vocabulary Activity:

- Identify and use synonyms for verbs and nouns like "showed" (e.g., "demonstrated," "revealed") and "volatility" (e.g., "instability," "fluctuations").
- Rewrite the phrase "marked disparity" using synonyms to change the level of formality.
- Discuss the use of the word "paralleled" in describing trends, exploring alternative expressions that could fit different contexts (e.g., "matched," "mirrored").

Cambridge IELTS 18 Test 1

WRITING TASK 1

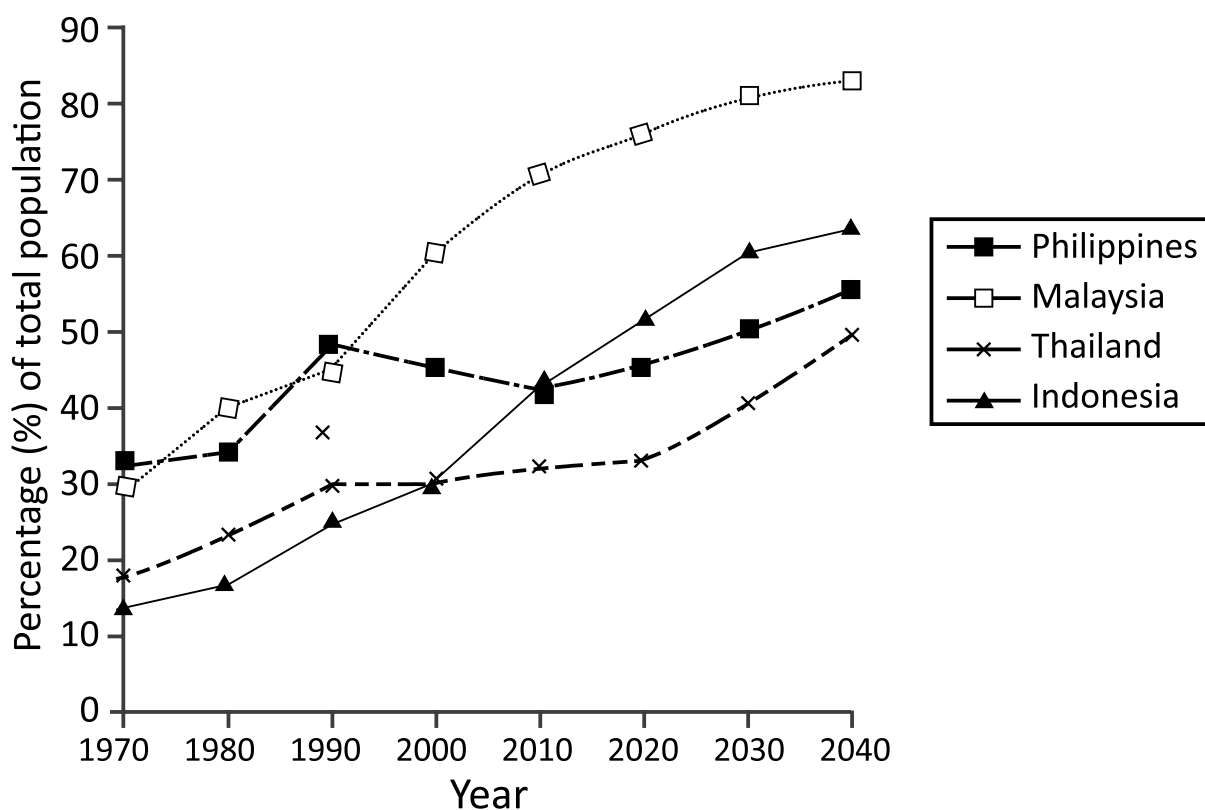

You should spend about 20 minutes on this task,

The graph below gives information about the percentage of the population in four Asian countries living in cities from 1970 to 2020, with predictions for 2030 and 2040.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Percentage of the population living in cities

Sample Answer:

The graph presents data on the percentage of the population residing in cities in four Asian countries—Philippines, Malaysia, Thailand, and Indonesia—from 1970 to 2020, with projections extending to 2040.

Overall, urbanization in these countries has shown a steady increase over the fifty-year period. Notably, the trend indicates that by 2040, the majority of the population in each country is expected to live in urban areas, with varying degrees of growth among the countries.

From 1970 to 2020, the Philippines showed a gradual but continuous increase in urban population, starting from around 35% and rising to approximately 65%. The trend is projected to continue, reaching nearly 80% by 2040, suggesting a strong shift towards urban living. Malaysia started at about 25% in 1970 and saw a more rapid increase, surpassing the Philippines by 2000 and reaching about 75% in 2020, with a forecast to rise to almost 85% by 2040.

In contrast, Thailand and Indonesia started with lower percentages of urban populations in 1970, around 15% and 10% respectively. However, both countries have experienced significant growth since then. Thailand's urban population is expected to increase from about 45% in 2020 to over 70% by 2040, while Indonesia, although progressing at a slower pace, is also expected to see a substantial increase from approximately 55% in 2020 to around 70% by 2040.

This analysis shows a clear trend of increasing urbanization across all four countries, each following a unique trajectory based on different starting points and rates of change, reflecting broader socio-economic trends and possibly government urban development policies.

Grammar Notes:

1. **Consistency in Describing Trends:** When describing changes over time, it is important to use consistent verb tenses. For historical data, past simple is used, and for future projections, future forms are applied.
2. **Use of Commas and Prepositions:** Careful use of commas is necessary to avoid ambiguity, especially when listing countries or data points. Correct prepositions (“in” for years, “by” for projections) guide clarity and precision in expressions.

Vocabulary Activity:

- Explore synonyms for “increase” and “rise,” such as “climb,” “grow,” and “surge,” to enhance descriptive variety.
- Discuss the differences in terms like “urbanization,” “urban living,” and “urban development,” focusing on their contextual use.
- Replace “significant” and “substantial” with other adjectives that might alter the intensity of the description, such as “notable” or “considerable,” and discuss their nuances.

Cambridge IELTS 18 Test 4

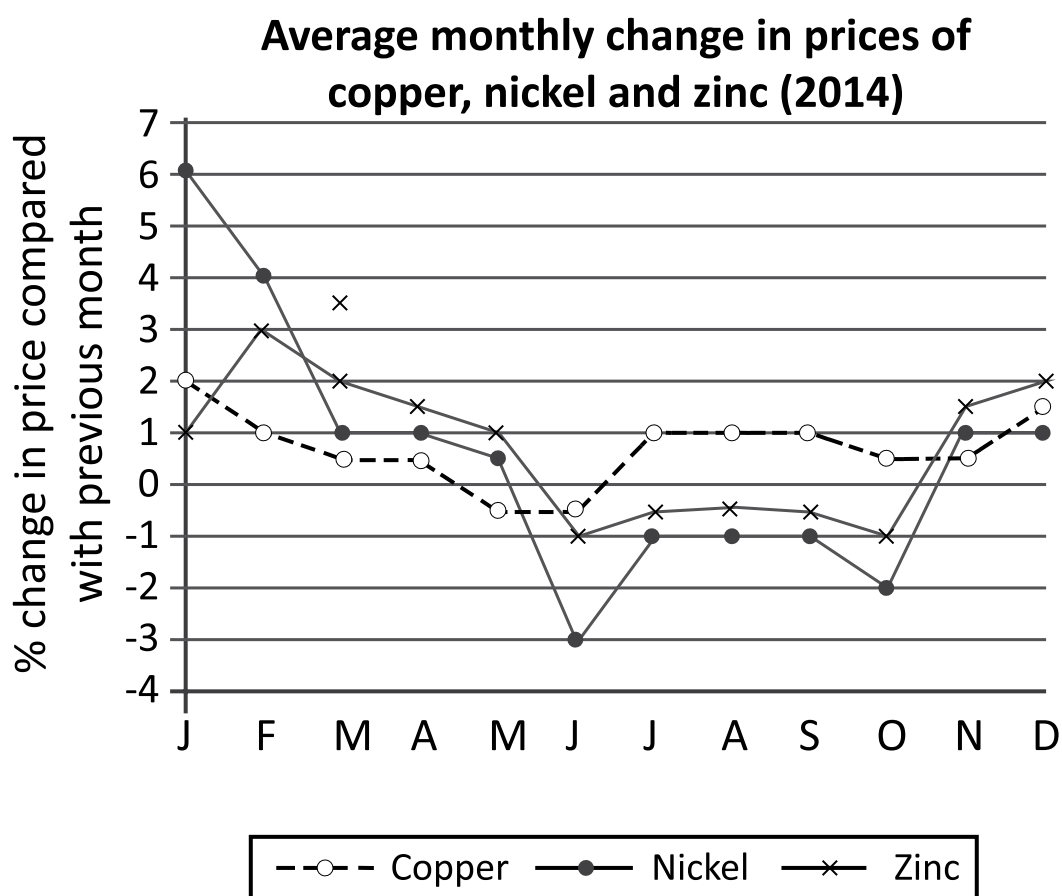

WRITING TASK 1

You should spend about 20 minutes on this task,

The graph below shows the average monthly change in the prices of three metals during 2014.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Sample Answer:

The graph illustrates the average monthly changes in the prices of copper, nickel, and zinc throughout the year 2014.

Overall, the graph reveals that the prices of all three metals fluctuated over the year, with each showing distinct patterns of variation. Copper and nickel displayed similar trends with sharp declines followed by periods of recovery, while zinc prices demonstrated more stability but with slight declines by the year's end.

Copper prices started the year with a slight decrease in January, followed by a steep decline reaching a low of approximately -3% change in March. The prices gradually recovered in the subsequent months, stabilizing around a 0% change from August to November, before experiencing a slight increase in December. Nickel showed a more volatile pattern, beginning the year around a 1% decrease, plummeting to almost -4% by May, then sharply recovering to positive values of about 2% in July, followed again by a decline and recovery towards the year's end.

Zinc prices, in contrast, maintained a steadier trend, starting the year with nearly no change and experiencing only minor fluctuations. A modest decline was noted around mid-year, dipping to nearly -1% in June, and subsequently stabilizing with minor positive changes towards December.

The data suggests that while copper and nickel experienced significant volatility with periods of notable decline and recovery, zinc prices remained relatively stable throughout 2014, indicating different market dynamics affecting each metal.

Grammar Notes:

1. **Adverb Placement:** Adverbs should be carefully placed to modify the correct word or phrase for clarity. For instance, "sharply" should clearly modify verbs describing the rate of price change, such as "declined" or "recovered."
2. **Prepositions in Dates:** Prepositions indicating specific times, such as "in" for months (e.g., "in March"), are crucial for accurately specifying the time of occurrences.

Vocabulary Activity:

- Replace phrases such as "steep decline" and "gradually recovered" with synonyms to diversify expression (e.g., "sharp fall" and "slowly improved").
- Discuss alternative terms for "fluctuated" and "stabilized," exploring how different choices might affect the tone or formality of the report.
- Rewrite the description of zinc's price changes using different vocabulary to convey stability or minor changes (e.g., "held steady," "saw slight adjustments").

Cambridge IELTS 19 Test 1

WRITING TASK 1

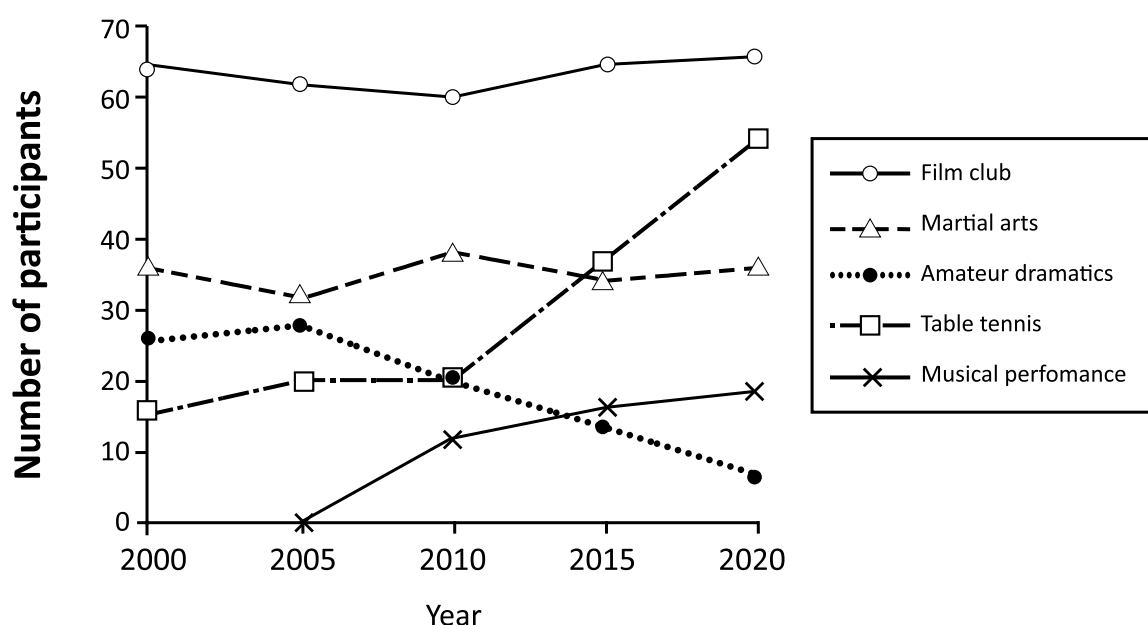

You should spend about 20 minutes on this task,

The graph below gives information on the numbers of participants for different activities at one social centre in Melbourne, Australia for the period 2000 to 2020.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Number of participants, by activity 2000-2020

Sample Answer:

The graph presents data on the participation in various activities at a social center in Melbourne, Australia, from 2000 to 2020, specifically tracking film club, martial arts, amateur dramatics, table tennis, and musical performances.

Overall, the film club saw consistently high participation throughout the period, starting and ending with around 60 participants, showing slight fluctuations but largely maintaining its popularity. In contrast, other activities experienced various levels of change over the 20 years.

The film club's participation began near 60 participants in 2000 and exhibited minor variations over the years, peaking slightly around 2010 before stabilizing back near its original level. Martial arts showed a slow but steady decline in interest, dropping from approximately 40 participants in 2000 to about 10 by 2020. Amateur dramatics displayed a relatively stable trend with a slight uptick towards 2020, starting with about 15 participants and growing modestly to around 20.

Table tennis participation experienced growth, starting from roughly 10 participants in 2000 and increasing to about 30 by 2020, indicating a growing interest in this activity. Musical performances, however, had a steep decline after an initial stable period; participation fell sharply from 30 participants in 2000 to just under 10 in 2020.

This data reflects a dynamic shift in the preferences and interests of the social center's attendees over two decades, with the film club consistently attracting a high number of participants, while musical performances significantly declined in popularity.

Grammar Notes:

1. **Use of Prepositions:** Correct use of prepositions in a timeline (from...to), showing the change across specific years, is crucial for clarity.
2. **Comparative Structures:** When describing changes in data, using comparative structures effectively highlights increases or decreases (e.g., "increased to about 30 by 2020").

Vocabulary Activity:

- Find synonyms for "participants" and "participation" to avoid redundancy (e.g., "attendees," "engagement").
- Replace "exhibited minor variations" with alternative phrases that might fit different descriptive needs (e.g., "showed slight changes").
- Discuss the term "stabilizing" in the context of data trends and explore synonyms such as "leveling off" or "maintaining stability."
