

Bar Chart

Cambridge IELTS 9 Test 2

WRITING TASK 1

You should spend about 20 minutes on this task,

The chart below shows the total number of minutes (in billions) of telephone calls in the UK, divided into three categories, from 1995-2002.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

UK telephone calls, by category, 1995-2002

Sample Answer:

The bar chart illustrates the total number of minutes spent on telephone calls in the UK, divided into three distinct categories: local fixed-line, national and international fixed-line, and mobile calls, over the period from 1995 to 2002.

Overall, the data indicates a significant shift in communication preferences among UK residents during the period studied, with a notable decrease in the use of local fixed-line services and a remarkable increase in mobile phone usage. National and international fixed-line calls showed more stability compared to the other categories.

Initially, in 1995, local fixed-line calls were the most common, accounting for nearly 80 billion minutes. This figure steadily declined to around 70 billion minutes by 2002. In contrast, mobile phone usage was minimal at the outset, with only about 3 billion minutes logged in 1995. However, these calls saw an exponential growth, escalating to roughly 45 billion minutes by 2002, underscoring a significant adoption of mobile technology.

Conversely, national and international fixed-line calls displayed a relatively stable trend throughout the period. Starting at approximately 38 billion minutes in 1995, this category experienced minor fluctuations, peaking at just over 40 billion minutes in the late 1990s before slightly declining to just below this mark by 2002. This suggests that while technology and preferences for local calls shifted markedly towards mobile usage, long-distance communication via fixed lines remained consistently essential.

Grammar Notes:

1. **Complex Sentences:** Use complex sentence structures to provide detailed information and clarify the relationship between data points (e.g., "While technology and preferences for local calls shifted markedly towards mobile usage, long-distance communication via fixed lines remained consistently essential").
2. **Consistency in Reporting Data:** It's crucial to maintain consistency when reporting statistical data, ensuring that the units and time frames are clear and consistent throughout the discussion.

Vocabulary Activity:

- Substitute "notable decrease" with synonyms like "significant reduction" or "marked decline," and explore how each term might affect the tone of the analysis.
- Replace "remarkable increase" with "substantial rise" or "steep climb," and discuss the impact of these choices on the descriptive strength of the trend.
- Use different terms for "stable," such as "steady" or "unchanging," and compare how these synonyms can subtly change the interpretation of data stability.

Cambridge IELTS 10 Test 3

WRITING TASK 1

You should spend about 20 minutes on this task,

The charts below show what UK graduate and postgraduate students who did not go into full-time work did after leaving college in 2008.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Destination of UK graduates (excluding full-time work) 2008

Destination of UK postgraduates (excluding full-time work) 2008

Sample Answer:

The bar charts present the destinations of UK graduates and postgraduates in 2008 who chose not to enter full-time work after completing their studies. The data is categorized into part-time work, voluntary work, further study, and unemployment.

Overall, the majority of both graduates and postgraduates engaged in further study or part-time work, with a smaller proportion participating in voluntary work or remaining unemployed. The charts demonstrate notable differences in the distribution of activities between the two groups.

For graduates, further study was the most popular option, with approximately 29,665 individuals pursuing additional education, closely followed by part-time work which attracted 17,735 participants. Voluntary work and unemployment were less common, with 3,500 and 16,235 individuals respectively. This suggests a significant inclination among graduates towards enhancing their education and skills shortly after university.

In contrast, postgraduates showed a different pattern. The largest number engaged in part-time work, with 2,535 individuals, while 2,725 chose further study. Voluntary work was the least favored option, involving only 345 postgraduates. Unemployment was recorded for 1,625 postgraduates, indicating a slightly better employment situation for postgraduates compared to graduates.

These trends reflect distinct post-education paths for graduates and postgraduates in the UK in 2008, with a general preference for continuing education and part-time employment. This might highlight the challenges or personal choices facing individuals in the transition from higher education to full-time employment.

Grammar Notes:

1. **Plural Forms:** Ensure correct use of plural forms when discussing groups (e.g., graduates, postgraduates), especially when the numbers are specified.
2. **Consistent Verb Tenses:** Use past simple to describe specific actions or states in the past, particularly when reporting on data from a defined year like 2008.

Vocabulary Activity:

- Replace “engaged in” with synonyms such as “participated in” or “opted for” to explore variations in expression.
- Discuss and find alternatives for “popular” and “favored” in the context of describing choices made by graduates and postgraduates.
- Re-phrase “remaining unemployed” to “were unemployed” or “experienced unemployment” to alter the passive construction and focus on the agency.

Cambridge IELTS 12 Test 7

WRITING TASK 1

You should spend about 20 minutes on this task,

The chart below shows how frequently people in the USA ate in fast food restaurants between 2003 and 2013.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Frequency of eating at fast food restaurants among people in the USA (2003-2013)

Sample Answer:

The bar chart illustrates the frequency of fast food consumption among people in the USA over three selected years: 2003, 2006, and 2013. The frequencies are categorized as eating fast food every day, several times a week, once a week, once or twice a month, a few times a year, and never.

Overall, the chart shows a decline in the most frequent consumption categories over the decade, with an increase in the less frequent consumption categories, indicating a possible shift in eating habits among Americans.

In 2003, the most common frequency was eating fast food once a week, with around 35% of people reporting this habit. This was followed by several times a week at about 25%, and once or twice a month at around 20%. Eating fast food every day was the least common, with less than 5% of people doing so.

By 2006, there was a noticeable shift in these trends. The percentage of people eating fast food once a week rose slightly to approximately 37%, while the frequency of eating several times a week dropped to just over 20%. The once or twice a month category saw an increase to about 25%.

By 2013, the trends had shifted more distinctly. The once a week category remained the most popular but had decreased to about 30%. The several times a week category saw a further decrease to around 15%. Notably, the once or twice a month category continued to grow, reaching close to 30%, indicating a trend towards more moderate consumption of fast food. Additionally, the percentage of people who never ate fast food grew slightly over the decade.

These changes suggest a shift towards more moderate fast food consumption patterns in the USA between 2003 and 2013, possibly reflecting increased health consciousness or changes in lifestyle.

Grammar Notes:

1. **Adverbs of Frequency:** The chart uses terms like “every day,” “several times a week,” which are adverbs of frequency. It’s important to use these accurately to describe the regularity of activities.
2. **Comparative Structures:** When describing changes over time, it’s essential to use comparative forms accurately (e.g., “a noticeable shift,” “a further decrease”).

Vocabulary Activity:

- Find synonyms for “frequency” and “consumption” to avoid redundancy and enhance vocabulary richness (e.g., “regularity,” “intake”).
- Discuss different ways to express increases and decreases in percentages (e.g., “rose slightly,” “grew,” “declined,” “dropped”).
- Replace phrases like “the most common frequency” with alternative expressions such as “the predominant frequency” or “the most frequent category.”

Cambridge IELTS 12 Test 5

WRITING TASK 1

You should spend about 20 minutes on this task,

The bar chart below shows the percentage Of Australian men and women in different age groups who did regular physical activity in 2010.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Percentage of Australian men and women doing regular physical activity: 2010

Sample Answer:

The bar chart provides a comparison of the percentages of Australian men and women across various age groups who engaged in regular physical activity in the year 2010.

Overall, the participation in regular physical activity among Australians varies slightly between genders and shows a notable trend across age groups. Both genders demonstrate a decrease in physical activity as age increases, with a temporary increase in certain age groups.

For the youngest age group, 15 to 24 years, a higher percentage of males (52.8%) participated in regular physical activity compared to females (47.7%). This trend reverses in the 25 to 34 age group, where females (48.9%) slightly outpace males (42.2%). The participation for males in the 35 to 44 age bracket increases to 52.5%, which is higher than the 39.5% for females, indicating a significant gender disparity in this age group.

In the middle age brackets, 45 to 54 and 55 to 64, participation rates are quite similar between genders, with males at 43.1% and 45.1% and females at 53.3% and 53%, respectively. The data suggests a higher activity level among females in midlife. For the oldest age group, 65 and over, participation rates converge again to 46.7% for males and 47.1% for females, showing minimal difference between genders.

This chart illustrates how physical activity trends fluctuate with age and gender in Australia, revealing a complex interaction between these factors. While younger and older age groups show more parity between genders, middle-aged groups exhibit a more marked difference in activity levels.

Grammar Notes:

1. **Subject-Verb Agreement:** It is essential to maintain agreement between subject and verb, especially when discussing percentages of a group, e.g., “a higher percentage of males participates.”
2. **Modifiers:** Use modifiers correctly to clarify what is being described, e.g., “in the year 2010” should clearly follow the noun it modifies without causing confusion.

Vocabulary Activity:

- Replace “engaged in” with synonyms such as “participated in” or “were involved in” to vary language use.
- Use different terms to describe quantitative changes, such as “increase,” “rise,” “grow,” and discuss their connotations.
- Discuss alternative words for “regular physical activity,” such as “consistent exercise” or “routine physical activity,” and explore how these choices might affect the tone or formality of the report.

Cambridge IELTS 13 Test 3

WRITING TASK 1

You should spend about 20 minutes on this task,

The bar chart below shows the top ten countries for the production and consumption of electricity in 2014.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Sample Answer:

The bar chart compares the top ten countries in terms of electricity production and consumption in 2014, indicating significant variations in energy management among these nations.

Overall, all top ten countries produced enough electricity to meet their consumption needs, with some exhibiting a surplus. China and the United States are the clear leaders in both production and consumption, significantly outpacing other countries.

China was the top producer and consumer, generating over 5,300 billion kWh and consuming just slightly less, around 5,322 billion kWh, suggesting a very high demand met by equally high production. The United States followed, with production at approximately 4,099 billion kWh and consumption at 3,866 billion kWh, indicating a substantial surplus in production over domestic needs.

Russia, ranking third, had a relatively balanced production and consumption, with figures just over 1,000 billion kWh for each. Japan, the fourth on the list, produced 936.2 billion kWh and consumed 856.7 billion kWh, also showing more production than consumption.

Countries like India, Canada, and Brazil demonstrated significant production to meet their consumption demands, with India producing 871 billion kWh against a consumption of 698.8 billion kWh. Notably, Canada had a high surplus, producing 618.9 billion kWh while consuming only 499.9 billion kWh.

France, Brazil, Germany, and South Korea also made the list, each producing enough to cover consumption, with varying degrees of surplus. Germany was unique in having slightly higher consumption (582.5 billion kWh) compared to production (526.6 billion kWh), which is an anomaly among the top ten.

This chart not only illustrates the scale of electricity handling by these economic powerhouses but also highlights the energy surplus most of these countries maintain, perhaps for reasons like exports or reserve stocks, except for Germany which consumed more than it produced.

Grammar Notes:

1. **Numbers and Measurements:** It's crucial to consistently use units when discussing quantities like billion kWh to avoid confusion.
2. **Comparatives and Superlatives:** Correct use of comparatives (e.g., "higher", "less") and superlatives (e.g., "the top", "the most") is essential for clarity and accuracy in describing data.

Vocabulary Activity:

- Find synonyms for "produced" and "consumed" to enhance lexical resource (e.g., "generated", "utilized").
- Discuss the difference between "surplus" and "excess" in the context of production and consumption.
- Replace "significant" with other adjectives like "considerable" or "substantial" to vary expression and discuss how these changes might impact the tone of the analysis.

Cambridge IELTS 13 Test 2

WRITING TASK 1

You should spend about 20 minutes on this task,

The chart below shows the percentage Of households in owned and rented accommodation in England and Wales between 1918 and 2011.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Households owning and renting accommodation in England and Wales 1918 to 2011

Sample Answer:

The bar chart provides a comparative analysis of the percentages of households in owned and rented accommodation in England and Wales from 1918 to 2011.

Overall, there has been a significant shift in the housing dynamics over the specified period. The early years were dominated by rented accommodations, but a notable transition towards home ownership began in the mid-20th century.

In 1918, only a small fraction of households, around 23%, owned their accommodation, while a substantial majority, about 77%, rented. This trend of high rental rates continued until after World War II, with 1939 figures showing slightly less dominance in renting at approximately 68%. Home ownership increased to around 32% by the same year, indicating a slow but steady rise.

The trend towards ownership became more pronounced in the subsequent decades. By 1961, the percentage of households owning their homes rose to nearly 43%, with renters making up 57%. This shift gained significant momentum by 1971, where the percentage of homeowners surpassed renters for the first time, registering at 51%.

By 2001, home ownership had surged to its peak at around 69%, with only about 31% of households in rented accommodation. However, the trend slightly reversed by 2011, with ownership decreasing to about 64% and rentals increasing to 36%, reflecting possible economic influences affecting the housing market during this period.

This data highlights the substantial changes in housing tenure in England and Wales over nearly a century, with a clear movement from a predominantly rental-based housing market to one favoring home ownership, and a slight rebalance in the early 21st century.

Grammar Notes:

1. **Past Tense:** Use the past simple tense consistently when describing historical data to maintain clarity and accuracy.
2. **Numerical Data Representation:** Ensure that percentages and data points are clearly stated as part of the narrative to avoid ambiguity.

Vocabulary Activity:

- Replace “significant” with synonyms like “considerable” or “marked” to enhance vocabulary diversity.
- Discuss the difference between “surge” and “increase” and how they might affect the reader’s perception of the data.
- Find alternative ways to express “a majority,” such as “the greater part” or “the larger number,” and explore their contextual suitability.

Cambridge IELTS 15 Test 1

WRITING TASK 1

You should spend about 20 minutes on this task,

The chart below shows the results of a survey about people's coffee and tea buying and drinking habits in five Australian cities.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Coffee and tea buying and drinking habits in five cities in Australia

Sample Answer:

The bar chart illustrates the coffee and tea buying and drinking habits of residents in five Australian cities—Sydney, Melbourne, Brisbane, Adelaide, and Hobart—focusing on their behavior over the last four weeks.

Overall, the chart indicates a notable preference for purchasing fresh coffee over instant coffee, with the exception of Hobart. Additionally, a significant proportion of residents in each city reported visiting a café for coffee or tea recently, suggesting a robust café culture across these urban areas.

In Sydney and Melbourne, over 50% of the residents bought fresh coffee, which is significantly higher than those who bought instant coffee, with figures around 35% and 45% respectively. Both cities also saw over 50% of their residents visiting cafés, indicating a strong preference for freshly brewed options outside the home. Brisbane displays a similar pattern with slightly less emphasis on fresh coffee, where around 45% of people bought fresh coffee and approximately 40% visited cafés.

Adelaide and Hobart show distinct patterns; in Adelaide, nearly 50% of the people bought fresh coffee, which is much higher compared to the roughly 30% who purchased instant coffee. In Hobart, however, nearly 60% of the respondents went to a café, the highest among the cities, yet the preference for fresh versus instant coffee is more balanced compared to the other cities.

These statistics not only reflect the coffee and tea consumption trends in these cities but also highlight the cultural importance of café visits in urban Australian life. The data reveals a clear trend towards fresh coffee, with café visits being an integral part of this coffee culture.

Grammar Activity:

1. **Compound Sentences:** Create compound sentences from two simple sentences. Example: Combine “Over 50% of residents bought fresh coffee. This is significantly higher than those who bought instant coffee” into “Over 50% of residents bought fresh coffee, which is significantly higher than those who bought instant coffee.”
2. **Passive Voice:** Convert active sentences to passive ones to emphasize the action rather than the subject. Example: “Residents bought fresh coffee” becomes “Fresh coffee was bought by residents.”

Vocabulary Activity:

1. **Synonyms:** Identify and replace the following words with synonyms to expand vocabulary:
 - Notable: significant, remarkable, conspicuous
 - Preference: predilection, proclivity, inclination
 - Purchased: acquired, procured, obtained
 - Visiting: frequenting, patronizing, going to
1. **Word Forms:** Change the form of a word from one part of speech to another. Example: Change “preference” (noun) to “prefer” (verb) in a sentence.
1. **Collocations:** Discuss common collocations related to coffee culture, such as “brewed coffee,” “purchase fresh coffee,” and “visit a café.” Explore how changing one word in these collocations can alter the meaning or usage.

Cambridge IELTS 17 Test 3

WRITING TASK 1

You should spend about 20 minutes on this task,

The chart below gives information about how families in one country spent their weekly income in 1968 and 2018.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Sample Answer:

The bar chart illustrates the changes in how families in one country allocated their weekly income across different categories from 1968 to 2018.

Overall, the data indicates significant shifts in spending patterns over the 50-year span, with decreases in proportionate spending on food and increases in housing and leisure expenses.

In 1968, the largest share of weekly income was spent on food, consuming nearly 35% of family budgets.

By 2018, this figure had dramatically decreased to around 15%, reflecting perhaps improvements in food production efficiency or lower real costs. Housing costs depicted the opposite trend; starting from about 15% of the weekly income in 1968, they rose to become the largest expense by 2018, accounting for over 30% of the family budget. This change underscores a significant rise in housing costs relative to income over the decades.

Other categories such as fuel and power, clothing and footwear, and household goods saw moderate changes. Spending on fuel and power increased slightly from just under 5% to approximately 10%. Clothing and footwear, as well as household goods, both decreased in their share of spending, suggesting possibly that these items became more affordable or that consumer preferences shifted away from material goods towards services and experiences, as indicated by the doubling in leisure spending from about 10% to over 20% of weekly income by 2018.

These shifts in spending patterns are reflective of broader economic changes, possibly including technological advancements, changes in goods and service costs, and evolving consumer priorities, particularly an increased focus on quality of life and leisure activities.

Grammar Activity:

1. **Passive vs. Active Voice:** Practice converting sentences from active to passive voice and vice versa. For example:
 - **Active:** "Families spent 35% of their income on food in 1968."
 - **Passive:** "35% of their income was spent on food by families in 1968."
2. **Comparative and Superlative Forms:** Create sentences using comparative and superlative forms to describe the changes over time. Examples include:
 - "Housing costs rose more significantly than any other category over the 50 years."
 - "Food experienced the largest decrease in budget share among all categories."

Vocabulary Activity:

- **Synonyms:** Find synonyms for the terms used in the analysis to enhance vocabulary richness. For instance:
 - Dramatically (adverb) can be replaced with "sharply," "significantly," or "steeply."
 - Decrease (verb) can be substituted with "decline," "drop," or "reduce."
- **Word Forms:** Practice changing the word forms to see how they fit into different contexts:
 - Spend (verb) to spending (noun)
 - Economic (adjective) to economically (adverb)
- **Collocations:** Identify and use correct collocations related to financial management and household spending:
 - "Allocate budget," "consumer preferences," "income allocation," "expenditure on housing."

Cambridge IELTS 17 Test 3

WRITING TASK 1

You should spend about 20 minutes on this task,

The chart below shows the number of households in the US by their annual income In 2007, 2011 and 2015.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Sample Answer:

The bar chart presents the distribution of US households based on their annual income across four different brackets (<\$25,000, \$25,000-\$49,999, \$50,000-\$74,999, \$75,000-\$99,999, and ≥\$100,000) in three different years: 2007, 2011, and 2015.

Overall, there has been a noticeable shift in income distribution over the observed period. Most notably, the number of households earning \$100,000 or more showed a significant increase.

In 2007, the largest group of households earned between \$25,000 and \$49,999, with this category exceeding 30 million households. The least populous income bracket was those earning \$100,000 or more. By 2011, the figures in all income brackets had decreased slightly, possibly due to economic factors impacting household income. However, the households earning less than \$25,000 and those earning \$100,000 or more were less affected compared to the middle-income brackets.

By 2015, there was a remarkable increase in the number of households earning \$100,000 or more, rising to almost 25 million, nearly doubling the figures from 2007. The households earning less than \$25,000 also increased significantly, suggesting a widening income gap. Conversely, the middle-income brackets, particularly those earning between \$25,000 and \$74,999, saw a reduction in their numbers, indicating a possible economic uplift for some into higher income brackets or a downturn into lower brackets.

This trend illustrates significant changes in the economic landscape in the US over eight years, with a growing disparity between the highest and lowest income earners and a shrinking middle class.

Grammar and Vocabulary Activity:

Grammar Activity:

1. **Use of Articles:** Practice using articles correctly by identifying when to use “the” or “a/an” in sentences like “The largest group of households earned between \$25,000 and \$49,999.”
2. **Passive Voice:** Convert active voice sentences to passive voice to focus more on the action than the subject. For example, “The number of households earning \$100,000 or more
3. showed a significant increase” could be rewritten as “A significant increase was shown in the number of households earning \$100,000 or more.”

Vocabulary Activity:

- **Synonyms:** Find synonyms for words used in the summary to enhance vocabulary. For example:
 - “Noticeable” can be replaced with “marked” or “significant.”
 - “Increase” can be substituted with “rise,” “growth,” or “surge.”
- **Word Forms:** Change nouns to verbs where applicable to see how it alters the sentence structure and meaning, such as changing “distribution” to “distribute.”
- **Collocations:** Identify and use proper collocations with “income” and “households,” such as “income bracket,” “household income,” “earn an income,” and “number of households.”
