

# Pie Chart

## Cambridge IELTS 9 Test 3

### WRITING TASK 1

You should spend about 20 minutes on this task,

The charts below give information on the ages of the populations of Yemen and Italy in 2000 and projections for 2050.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

#### YEMEN

#### ITALY

0-14 years

15-59 years

60+ years

### Sample Answer:

The pie charts provide a comparison between the age distributions of the populations in Yemen and Italy for the years 2000 and 2050, offering a visual insight into demographic changes over the fifty-year period.

In 2000, Yemen displayed a youthful demographic, with 50.1% of its population under 14 years of age and only a small fraction, 3.6%, aged 60 years and over. This contrasted sharply with Italy, where the population already showed signs of aging: only 14.3% were under 14 years, and a significant 24.1% were 60 years or older.

By 2050, the projections indicate substantial demographic shifts in both countries. In Yemen, the percentage of the population under 14 is expected to decrease to 37.0%, while the elderly population will rise to 5.7%. Conversely, Italy is expected to experience an even more pronounced aging trend, with those aged 60 and over projected to make up 46.2% of the population, nearly doubling from 2000, and the youngest age group shrinking further to 11.5%.

These trends suggest major implications for both countries. Yemen may face increased demands for education and job creation, while Italy could face challenges related to pension sustainability and healthcare services. The contrasting trajectories of these nations underline diverse national challenges and policy needs driven by demographic changes.

## Grammar and Vocabulary Activities:

### Grammar Activity:

1. **Passive Voice Practice:** Rewrite sentences from active to passive voice to focus on the action rather than the subject. For example, "Yemen displayed a youthful demographic" can be rewritten as "A youthful demographic was displayed by Yemen."
2. **Conditional Sentences:** Create conditional sentences to discuss the implications of these demographic changes. Example: "If the percentage of elderly increases, the government will need to invest more in healthcare."

### Vocabulary Activity:

- **Synonyms:** Identify and replace key adjectives with synonyms to enhance vocabulary. For instance:
  - "Youthful" can be replaced with "young" or "juvenile."
  - "Significant" can be substituted with "considerable" or "substantial."
- **Collocations:** Explore and use correct collocations with "demographic" and "projection." Examples include "demographic shift," "demographic trend," "projected increase," and "projected decline."
- **Word Formation:** Change nouns to adjectives or verbs to see how they fit into different contexts, such as changing "projection" to "projected" or "implication" to "imply."

## Cambridge IELTS 10 Test 1

### WRITING TASK 1

You should spend about 20 minutes on this task,

The first chart below shows how energy is used in an average Australian household. The second chart shows the greenhouse gas emissions which result from this energy use.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

#### Australian household energy use

#### Australian household greenhouse gas emissions

#### Sample Answer:

The pie charts compare the distribution of energy usage and greenhouse gas emissions across different household activities in an average Australian household.

The first chart details how energy is consumed within the home. Heating is the largest consumer, accounting for 42% of household energy usage, followed by water heating, which uses 30%. Other

significant uses include appliances at 15%, refrigeration at 7%, and lighting at 4%, with cooling representing a minimal 2%.

The second chart shifts focus to the greenhouse gas emissions resulting from these energy uses. While water heating is the largest emitter, constituting 32% of the household's emissions, it is closely followed by other appliances which contribute 28%. Heating, although the largest energy consumer, accounts for a smaller proportion of emissions at 15%. Refrigeration and lighting emissions stand at 14% and 8%, respectively, with cooling contributing the least at 3%.

This comparison highlights several insights. Firstly, water heating, while consuming less energy than heating, contributes a higher proportion of emissions, indicating it may be less energy-efficient or reliant on more carbon-intensive energy sources. Secondly, despite its lower energy share, the emissions from appliances are disproportionately high, suggesting these devices are significant contributors to the household's carbon footprint. Conversely, heating's high energy use does not translate into equivalently high emissions, possibly due to more efficient or cleaner heating technologies.

These discrepancies between energy consumption and greenhouse gas emissions underscore the importance of considering both energy efficiency and the type of energy sources used in reducing household emissions. The charts collectively provide a clear picture of where energy efficiency improvements and changes in energy sourcing could most effectively reduce environmental impacts.

## Grammar and Vocabulary Activity:

### Grammar Activity:

1. **Modal Verbs for Suggestions:** Practice using modal verbs to suggest improvements or actions. For example, "could," "should," or "might" can be used to propose energy efficiency measures or changes in energy sources.
2. **Relative Clauses:** Enhance descriptions by adding relative clauses to provide additional information without starting a new sentence. For example, "which uses 30%" can be integrated into a broader sentence to add detail smoothly.

### Vocabulary Activity:

- **Synonyms for Common Terms:** Replace terms like 'energy usage' and 'greenhouse gas emissions' with synonyms or paraphrases to avoid repetition and enhance vocabulary. Possible replacements include "energy consumption," "energy expenditure," "emissions output," and "carbon emissions."
- **Adjectives for Impact:** Find adjectives to describe the environmental impact of different energy uses. For instance, "significant," "minimal," "substantial," "considerable," and "moderate."
- **Discussing Proportions and Percentages:** Explore different ways to describe data percentages, such as "constitutes," "represents," "accounts for," and "makes up."

## Cambridge IELTS 11 Test 1

### WRITING TASK 1

You should spend about 20 minutes on this task,

The charts below show the percentage of water used for different purposes in six areas of the world.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

### Percentage of water used for different purposes in six areas of the world

#### Sample Answer:

The pie charts provide a detailed comparison of water usage for different purposes—industrial, agricultural, and domestic—in six global regions: North America, South America, Europe, Africa, Central Asia, and Southeast Asia.

Overall, the charts illustrate significant regional variations in water usage patterns. Agricultural use dominates in regions with extensive agricultural activities, while industrial use is more prominent in more industrialized economies.

In North America, agricultural use accounts for 48% of water usage, slightly more than industrial use at 39%, and domestic use at 13%. This balance indicates a diversified economy with substantial

agricultural and industrial sectors. South America, on the other hand, shows a heavy reliance on water for agriculture at 71%, with industrial and domestic uses at 19% and 10% respectively, reflecting the region's strong agricultural base.

Europe presents a different pattern where industrial use is the most significant, consuming 53% of water, followed by agriculture at 32% and domestic use at 15%. This highlights Europe's industrial capacity. Conversely, Africa and Central Asia show an overwhelming dependence on water for agriculture, with 84% and 88% respectively, indicating the critical role of agriculture in these regions' economies.

Southeast Asia also relies heavily on agriculture, which uses 81% of water, showing similar patterns to Africa and Central Asia, albeit with a slightly higher proportion of water used for domestic purposes at 12%.

These charts underscore the diverse strategies and needs for water management across different regions, reflecting each area's economic activities and developmental priorities. The reliance on agricultural water use in less industrialized regions points to potential vulnerabilities related to water scarcity and the need for sustainable water management practices.

## Grammar and Vocabulary Activities:

### Grammar Activity:

1. **Comparatives and Superlatives:** Practice creating sentences that use comparative and superlative forms to describe the data. Example: "Central Asia has the highest percentage of water used for agriculture."
2. **Complex Sentences with Relative Clauses:** Enhance descriptions by incorporating relative clauses. Example: "Europe, where industrial use consumes more than half of the water, shows a different pattern from Africa, where agriculture dominates."

### Vocabulary Activity:

- **Synonyms:** Find and use synonyms for frequently used words to expand vocabulary:
  - "Usage" can be replaced with "consumption," "utilization," or "exploitation."
  - "Domestic" might be substituted with "residential" or "household."
- **Collocations:** Identify and correctly use collocations related to water use, such as "water management," "agricultural activities," "industrial capacity," and "domestic consumption."
- **Word Forms:** Change verbs to nouns, adjectives to adverbs, etc., to see how they fit into different contexts. For example, change "consume" to "consumption" and "industrial" to "industrialized."

## Cambridge IELTS 11 Test 2

### WRITING TASK 1

You should spend about 20 minutes on this task,

The charts below show the proportions of British students at one university in England who were able to speak other languages in addition to English, in 2000 and 2010.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

% of British Students able to speak languages other than English, 2000

% of British Students able to speak languages other than English, 2010

#### Sample Answer:

The pie charts compare the linguistic abilities of British students at one university in England, specifically focusing on the percentage of students able to speak languages other than English in the years 2000 and 2010.

In 2000, a significant 30% of students did not speak any language other than English. French was the most commonly spoken second language, with 20% of students speaking it exclusively. Other languages, including German and Spanish, were spoken by 15% of students each, and 10% of students were able to speak two other languages. A further 10% spoke an unspecified different language.

By 2010, the proportion of students who did not speak any additional languages decreased to 20%, reflecting an improvement in language learning. The percentage of students who spoke French only dropped slightly to 15%, while those speaking German only remained stable at 15%. Notably, there was an increase in the percentage of students speaking Spanish only, rising to 20% from the previous 15%. The proportion of students speaking two other languages saw a small decrease to 10%, and those speaking another unspecified language increased to 15%.

The comparison over the decade shows a positive trend towards multilingualism among students, with a decrease in monolingual English speakers and a noticeable increase in students learning Spanish. The data indicates a shift in language preference or educational emphasis, suggesting that Spanish may be growing in popularity or perceived utility among students compared to French.

## Grammar and Vocabulary Activities:

### Grammar Activity:

1. Past Tense Revision: Practice forming sentences in the past simple tense to accurately
2. describe changes over time. Example: "The proportion of students who did not speak any additional languages decreased from 30% to 20%."
3. Percentage Description: Use various structures to describe percentages and changes, such as "rose to," "fell to," "increased by," and "decreased by."

### Vocabulary Activity:

- **Synonyms for Increase and Decrease:** Find synonyms to replace 'increase' and 'decrease' to enhance vocabulary. Examples might include "escalate," "grow," "decline," and "diminish."
- **Language and Ability Descriptors:** Discuss and utilize various terms related to language proficiency, such as "bilingual," "monolingual," "fluent," "conversational," and "native level."
- **Adjectives for Charts and Changes:** Use adjectives to describe the data presentation and the nature of changes. Examples include "significant," "slight," "notable," and "substantial."

## Cambridge IELTS 14 Test 1

### WRITING TASK 1

You should spend about 20 minutes on this task,

The charts below show the average percentages in typical meals Of three types Of nutrients, all of which may be unhealthy if eaten too much.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words,

Average percentages of sodium, saturated fats and added sugars in typical meals consumed in the USA

### Sample Answer:

The pie charts illustrate the distribution of sodium, saturated fats, and added sugars across different meal times—breakfast, lunch, dinner, and snacks—in typical meals consumed in the USA, highlighting dietary trends and potential health implications.

For sodium intake, the highest percentage is consumed during dinner, making up 43% of daily sodium intake, followed by lunch at 29%, and breakfast at 14%. Snacks also contribute 14% to the daily sodium intake, indicating a considerable intake during non-main meal times. This pattern suggests that dinner is a significant source of sodium, likely due to the types of foods consumed during this meal.

Saturated fats show a different distribution, with the largest portion consumed at dinner (37%), but unlike sodium, a substantial amount is also ingested through snacks, accounting for 26%. Breakfast and lunch contribute relatively less, with 21% and 16% respectively. The high intake from snacks may point to the consumption of high-fat snack foods, which could be an area of concern for dietary health.

Added sugars are most commonly consumed during snacks, comprising 42% of the daily intake, surpassing all main meals. Dinner follows with 23%, and breakfast and lunch are lower at 19% and 16%, respectively. The predominance of added sugars in snacks highlights a dietary preference for sweet, possibly processed snack foods.

Overall, the charts reveal that while dinner remains the main meal contributing to intake of all three unhealthy nutrients, snacks are a significant source of both saturated fats and added sugars. These insights could inform public health initiatives aimed at reducing snack consumption or promoting healthier snack alternatives to mitigate health risks associated with high intake of these nutrients.

## Grammar and Vocabulary Activities:

### Grammar Activity:

1. **Use of Articles and Prepositions:** Practice identifying and correcting the use of articles and prepositions in a dietary context. For example, change “the highest percentage is consumed in dinner” to “the highest percentage is consumed at dinner.”
2. **Adjective-Noun Agreements:** Ensure that adjectives agree in number and tense with the nouns they modify, such as “typical meals consumed in the USA” instead of “typical meal consumed in the USA.”

### Vocabulary Activity:

- **Synonyms for Dietary Terms:** Replace terms like ‘consumed’ and ‘intake’ with synonyms to expand vocabulary. Examples include “ingested” for ‘consumed’ and “consumption” for ‘intake.’
- **Describing Quantities:** Explore different ways to describe percentages and quantities, such as “comprises,” “accounts for,” “constitutes,” and “makes up.”
- **Nutrient-Related Vocabulary:** Discuss and use terms related to nutrition, such as “nutrient-dense,” “caloric content,” “high-fat,” and “processed foods.”
